

Scality RING & Storage Made Easy

Organizations now have greater visibility on the benefits provided by object-based storage solutions regarding scalability and lower costs. The problem with moving to a new storage solution is that not all user workflows and applications will be compatible without modification. A modern and well-designed solution is needed that bridges the gap between applications and the object storage layer that actually increases user productivity.

Scality and Storage Made Easy® have created a solution that enables users across cloud and object storage environments to easily and securely access, store, and share files from any desktop or mobile device. The solution utilizes the Storage Made Easy Enterprise File Fabric™ platform to bring enterprise file content services, secure sharing, collaboration, and cross-cloud migration capabilities to the Scality RING platform.

The Enterprise File Fabric™ can provide users access to their data through desktop applications like a network file system with native drive access for Windows, Mac, and Linux inclusive of file locking, versioning, commenting, and permission capabilities. Data can be synchronized locally and shared globally through native integration with Microsoft Office, OpenOffice, and Mac Mail.

The combined solution will also enable organizations to collaborate efficiently through desktop and web-based tools and via mobile applications and devices. Features that will enhance day to day activities include markup and PDF annotation, file activity monitoring, full text search, and leverage archives and audit logs as needed.

Storage Made Easy will also enable organizations to migrate to a highly scalable object-based storage solution such as the Scality RING from existing storage. The combined solution will help any business be agile and reduce operating costs and the complexity of storage at a large scale.

Scality and Storage Made Easy® have created a solution that enables users across cloud and object storage environments to easily and securely access, store, and share files from any desktop or mobile device.

What's in it for you?

Lower Cost

Scality & Storage Made Easy enable organizations to replace expensive site-locked NAS file systems with comprehensive internet-friendly file and object services backed by private cloud storage at exabyte-scale at a cost point that is comparable to tape.

Data Protection

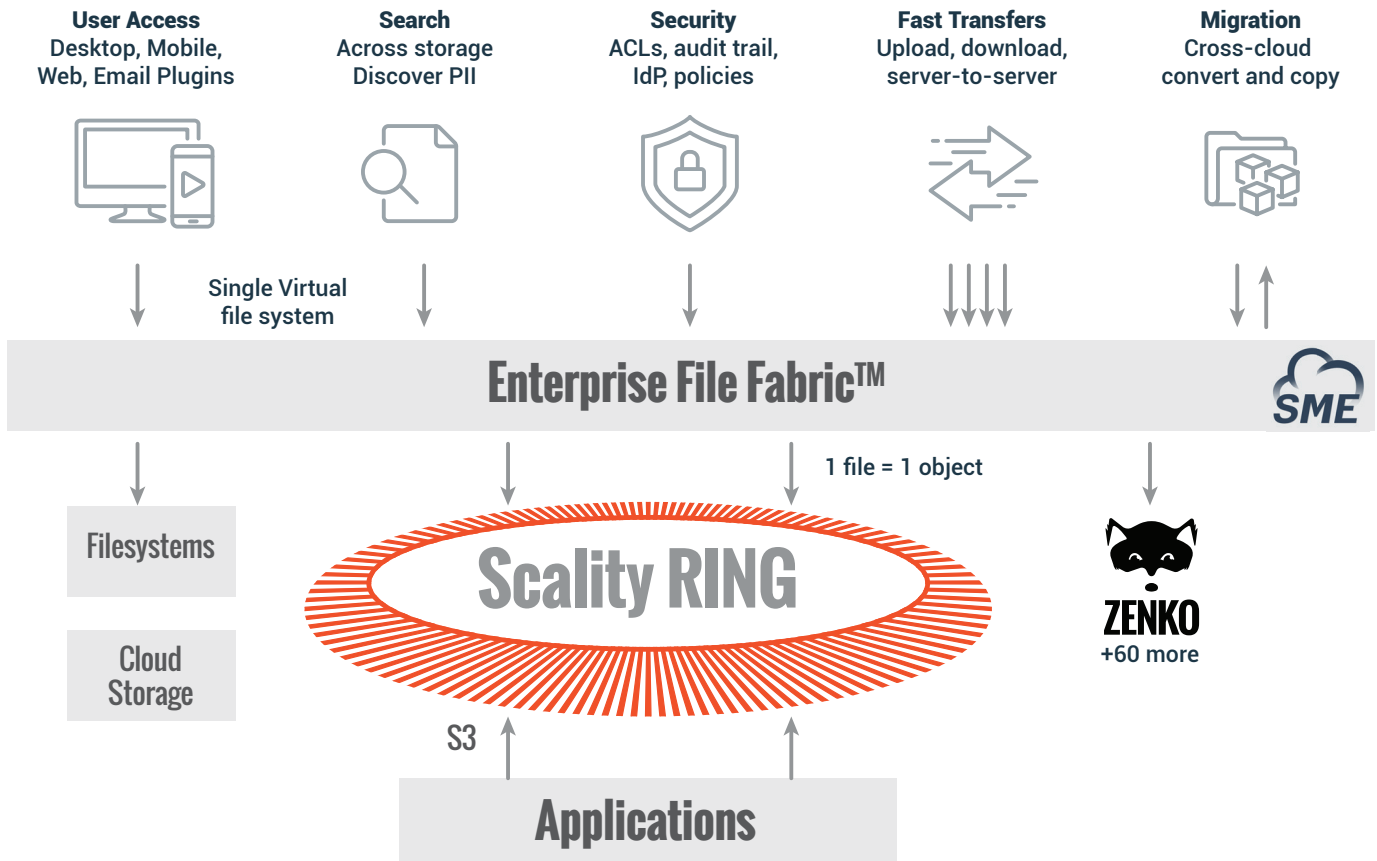

Enforce data security policies across legacy, private and public cloud storage providers in one place. IT can enforce hierarchical, role-based access, sharing, and encryption policies across the Scality RING. Want to limit downloads or reject weak passwords? No problem! Audit trails and archive capabilities provide peace of mind.

Data Right Now

Now Users can keep all data online (active archive) moving multi-gigabyte files as easily as they move office documents. M-Stream™ file transfer acceleration speeds up the uploading, downloading and replication of very big files between storage systems, clouds and intra-data center too.

Search Index

Find the right data quickly through a metadata and content index. Users only see results they are authorized to see. Add transcription, object detection and enhanced metadata for media files and others. Mobile, desktop and web-based applications provide fast access.

About Storage Made Easy The Storage Made Easy Enterprise File Fabric™ allows IT to regain control of cloud and storage sprawl unifying private and public file and object storage into a single converged infrastructure that can be more easily be managed, supporting organizational governance and audit controls. Users can securely sync files, share and collaborate through native desktop and mobile applications, Office plugins and O/S drives. The company focuses on two large and emerging markets. The first is data security, encompassing governance and compliance, and the second is the large and growing cloud market (public and private) for which SME has a large footprint and strong channel partners. About Scality Scality builds the most powerful storage tools to make data easy to protect, search and manage anytime, on any cloud. We give customers the autonomy and agility necessary to be competitive in a data-driven economy. Recognized as a leader in distributed file and object storage by Gartner and IDC, we help you to be ready for the challenges of the fourth industrial revolution.

Let us show you how.
