Scality RING & Commvault Simpana
Actively Manage, Access and Leverage Data Where It Resides

The one thing enterprise data is not is "uniform." Which is why your data protection, backup and recovery solution, as well as your storage, should cover the full range of data sources and file types. With all that data diversity, the last thing you want is to maintain a separate point solution and storage silo for each distinct backup and recovery requirement. And with Scality RING + Commvault Simpana, you don't have to: our integrated solution for automated data protection provides a single, scalable storage target with a complete view of all your stored data.

Scality RING + Commvault Simpana enables you to back up your databases, files, applications, endpoints and VMs with maximum efficiency according to data type and recovery profile. The joint solution enables you to optimize storage with deduplication and erasure coding. Recover your data rapidly and easily, whenever you need to, and leverage reports to continually improve your backup and recovery processes. Scality RING + Commvault Simpana software eliminates the separate data silos associated with traditional backup, archive and reporting products, leveraging any hardware and reducing infrastructure requirements.

Protect, access and use all of your data — anywhere and anytime

In order to deploy, and reap the benefits of, a modern approach to backup and recovery, you need deep application and hypervisor integration and intelligence paired with the capability to manage heterogeneous

What's In It for You?

Lower Costs Scality RING + Commvault Simpana software eliminates the separate data silos associated with traditional backup and archive which simplifies the management cost and reduces infrastructure requirements. This lowers your TCO by up to 90%. You can now leverage standard servers seamlessly (and those supply agreements!) to reduce training and maintenance costs – and for rapid scaling.

Safer Data Scality RING + Commvault Simpana enables you to back up your databases, files, applications, endpoints and VMs with maximum efficiency according to data type and recovery profile. Extreme fault tolerance with geo-distributed deployment and configurable protection policies (replication or erasure coding) take your protection to another level.
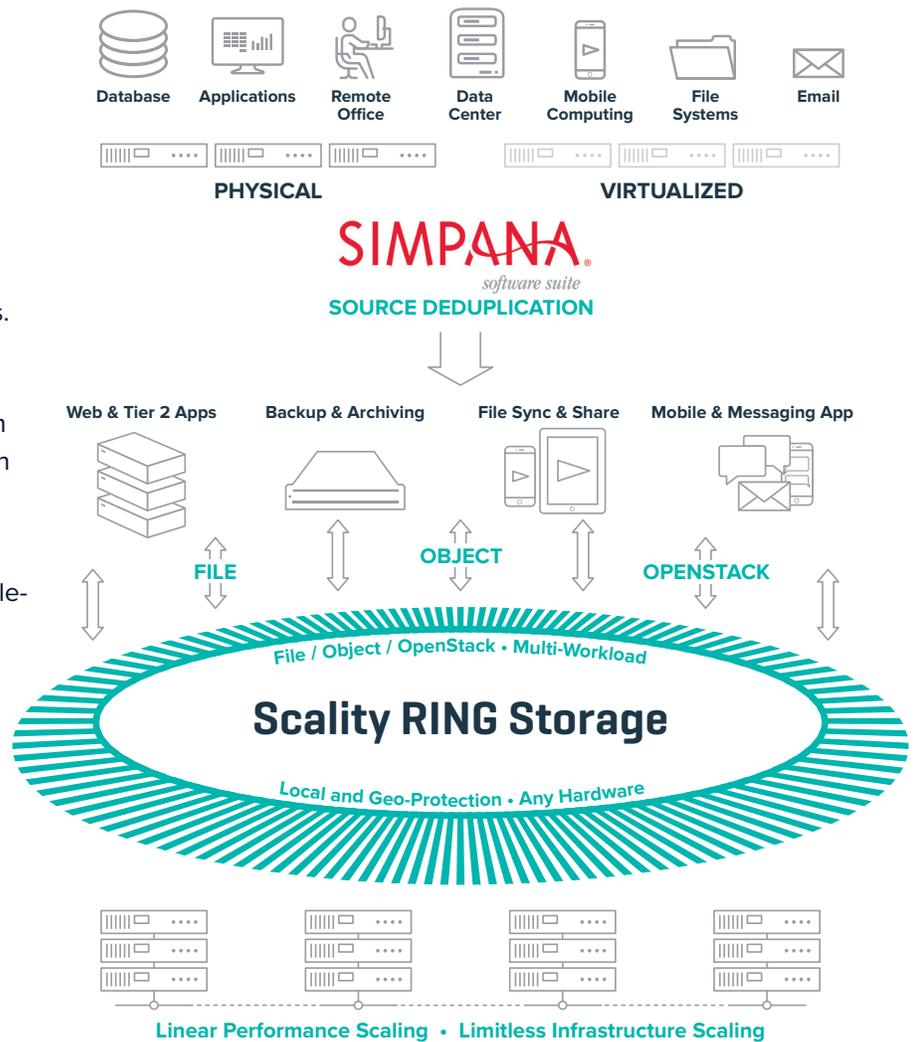

Intelligent Data The real value of data is in what you can do with it. A single virtual content repository makes it easier to index, archive and search for the information you need to get business done — turning your retained data into a strategic business asset. Protect your business and save costs by being able to rapidly respond to regulatory compliance and legal discovery requests, leverage unstructured and untagged "dark" data for better-informed business decisions, and enable the business to be more productive with end user self-service access to files and documents.

Perfect Fit The combination of Commvault and Scality helps you better protect ever-growing data volumes, efficiently manage information assets, and quickly find, recover and access data. With a truly unified and innovative data management solution you can transform your approach to data protection, allowing you to transcend the limitations of traditional backup and eliminate the complexity brought on by point products. Mutual certification ensures you aren't chasing vendors when problems arise. Whatever the fit, we've got you covered.

storage array snapshots for fast, application-consistent recovery. Your solution must be resilient and secure and possess the capability to deliver insights through integrated reporting that allow for continual improvement. Lastly, all the data that is protected should become an asset, instead of a management burden, by securely opening it up for self-service access through a single searchable index for new uses. Commvault's Simpana software delivers these capabilities through a single platform and console, across locations and at any scale, from a few terabytes to multinational enterprises with petabytes of data to protect and manage.

The Scality RING enforces the capabilities of Commvault Simpana by delivering a single, scale-out storage infrastructure for all data types and sizes. The Scality RING can grow from 100's of terrabytes beyond petabytes on one single or multiple sites.

About Comvault Simpana Commvault Simpana helps you transform your data into a powerful strategic asset. CommVault® Simpana® software helps you better protect ever- growing data volumes, efficiently manage information assets, and quickly find, recover and access data. With a truly unified and innovative data management solution you can transform your approach to data protection, allowing you to transcend the limitations of traditional backup and eliminate the complexity brought on by point products.

About Scality Scality, world leader in object and cloud storage, develops cost-effective Software Defined Storage (SDS): the *RING,* which serves over 500 million end-users worldwide with over 800 billion objects in production; and the open-source S3 Server. Scality RING software deploys on any industry-standard x86 server, uniquely delivering performance, 100% availability and data durability, while integrating easily in the datacenter thanks to its native support for directory integration, traditional file applications and over 45 certified applications. Scality's complete solutions excel at serving the specific storage needs of Global 2000 Enterprise, Media and Entertainment, Government and Cloud Provider customers while delivering up to 90% reduction in TCO versus legacy storage. A global company, Scality is headquartered in San Francisco.
