

Scality RING & Commvault Complete™ Backup & Recovery

The one thing enterprise data is not is “uniform.” Which is why your data protection, backup and recovery solution, as well as your storage, should cover the full range of data sources and file types. With all that data diversity, the last thing you want is to maintain a separate point solution and storage silo for each distinct backup and recovery requirement. And with Scality RING and Commvault Complete™ Backup & Recovery, you don’t have to: our integrated solution for automated data protection provides a single, scalable storage target with a complete view of all your stored data.

Scality RING paired with Commvault Complete™ Backup & Recovery enables you to back up your databases, files, applications, endpoints and VMs with maximum efficiency according to data type and recovery profile. The joint solution enables you to optimize storage requirements with deduplication and erasure coding. Recover your data rapidly and easily, whenever you need to. Scality RING and Commvault Complete™ Backup & Recovery software eliminate separate data silos associated with traditional backup, archive and reporting products, aggregating them into a single pool leveraging industry standard x86 servers and thereby streamlining infrastructure requirements.

Protect, access and use all of your data – anywhere and anytime

In order to deploy, and reap the benefits of, a modern approach to backup and recovery, the data that is protected should become an asset. Commvault's Complete Backup & Recovery software delivers on this promise through a single platform and console, across locations and at any scale. Scality RING reinforces that by delivering a single, scale-out storage infrastructure that scales limitlessly, maintains high levels of data protection (up to 14 nines of data durability), supports flexible geo-distribution deployments, and features multi-protocol access (NFS and SMB for file, S3 for object), sustaining high throughput while lowering TCO.

What’s in it for you?

Lower Cost

Scality RING and Commvault Complete™ Backup & Recovery software eliminate separate data silos associated with traditional backup and archive, thereby simplifying infrastructure requirements and reducing management cost. This lowers your TCO by up to 90%. You can now leverage industry standard x86 servers (and established supply agreements!) to reduce HW, maintenance, and training costs – while enjoying a more flexible, faster and seamless scaling.

Safer Data

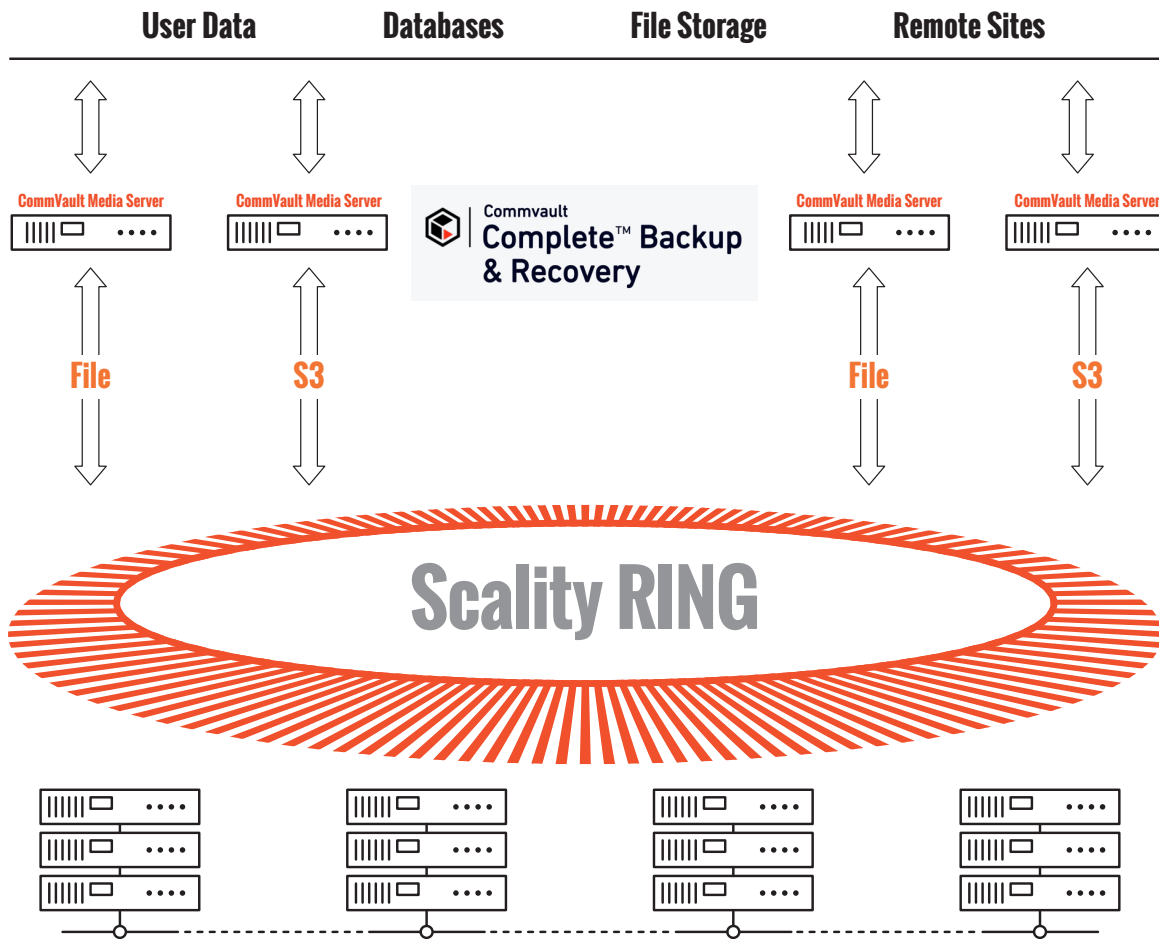

Scality RING and Commvault Complete™ Backup & Recovery enable you to back up your databases, files, applications, endpoints and VMs with maximum efficiency according to data type and recovery profile. High levels of data protection (up to 14 nines of data durability), flexible geo-distribution deployments (synchronous or asynchronous) and configurable protection policies (replication or erasure coding) take your protection to another level.

Intelligent Data

The real value of data is in what you can do with it. A single virtual content repository makes it easier to index, archive and search for the information you need to get business done – turning your retained data into a strategic business asset. Protect your business and save costs by being able to rapidly respond to regulatory compliance and legal discovery requests. Make better-informed business decisions by leveraging untagged “dark” data with an always-on, active, and accessible repository powered by Scality RING.

Perfect Fit

The combination of Commvault Complete™ Backup & Recovery and Scality RING helps you better protect ever-growing data volumes, efficiently manage information assets, and quickly find, recover and access data. Commvault Complete™ Backup & Recovery brings best-in-class deduplication technology to Scality RING. Combining maximum efficiency with extreme durability, scalability and performance renders deduplication appliances irrelevant in terms of functionalities and cost. Mutual certification ensures you aren't chasing vendors when problems arise. Whatever the fit, we've got you covered.
